

TOI-560C

It is located in the sky between the constellations of Hydra and the Unicorn

It is 2.39 times larger than the Earth

Discovered by the transit method

Discovered in 2021

Classified as Minineptun or Super-Earth

And here are some numbers..

It orbits the star TOI-560 with one other planet

Radius	15224 km
Mass	$5,793 \cdot 10^{25}$ kg
Volume	$1,48 \cdot 10^{22}$ m ³
Distance from Earth	103 light years
Life	rather not / no
Temperature	498 K
